Sarah Friis-Hansen

Product designer

Sarah is a passionate and ambitious product designer who is dedicated to transforming user needs into intuitive solutions. Sarah has experience leading the entire design process, from problem definition and conducting in-depth research to crafting innovative solutions and overseeing their seamless implementation. Sarah is a team player and open-minded, she constantly searching for the best possible solution and feels comfortable taking responsibility. Sarah's diverse experience across multiple industries has provided her with a comprehensive understanding of various facets of the design process, enhancing her ability to create impactful and user-centric designs.

Experience

UX Designer & Researcher
UX designer & content creator

Background

Healthcare
Building & Construction
FinTech
Medical
Payment
Beauty

Competences

AI products, User research, Wireframing, iOS, CMS systems, Android, Design Thinking, Personas, User testing, Userflows

Selected experience

Product Designer – Novo Nordisk A/S

Sarah led the UX and user research for an existing AI platform, focusing on validating user needs, uncovering barriers to adoption, and identifying opportunities to increase product usage. Through user interviews, usability testing and workflow analysis, translated insights into prioritised UX improvements and new user flows designed to better support different needs and drive adoption.

UX & UI Designer, Product Design – Novo Nordisk A/S

As a UX Designer on the Novo Nordisk AI Product project, Sarah led the end-to-end design of an internal AI tool built for employees with varying levels of AI experience. She combined user research with hands-on UI and interaction design, translating user needs into intuitive flows, interfaces and features focused on simplicity, relevance and accessibility. Through continuous testing and a feedback loop with power users, she iterated on both the user experience and visual interface to improve usability and adoption. Sarah also designed onboarding and learning experiences, collaborated closely with developers and stakeholders, and shared insights across teams to help shape the broader AI product strategy. Her work helped make AI more approachable, useful and embedded in employees' everyday workflows.

UX Designer & Researcher – Garnier

Garnier, a global beauty brand under L'Oréal, aimed to develop comprehensive Brand Design Guidelines for their new website, ensuring consistency and user-friendliness across various stakeholders. Sarah was enlisted to spearhead this project, focusing on research, stakeholder interviews, and prioritizing key pain points. With a focus on information architecture, visual elements, and navigation, Sarah crafted a concept for the Brand Design Guide, utilizing tools like ZeroHeight. Continuous testing with stakeholders ensured the guide's usability and navigational ease, serving as a valuable resource for editors, agencies, and new employees/partners.

UX Designer – Bank Nordik

Sarah joined the project as a UX Designer, leading the end-to-end design process from early discovery and problem definition through concept development, validation, and delivery.

She led user research and discovery activities to uncover customer needs, behaviours, and pain points, combining user insights with market research and customer journey mapping to identify and prioritise key opportunities. Sarah also facilitated workshops with the client and key stakeholders to align on user needs, business objectives, and product direction.

Based on these insights, Sarah translated complex requirements into intuitive user journeys, flows, and concepts, with a strong focus on usability, clear navigation, and creating a seamless end-to-end experience. Concepts were continuously tested and validated, allowing insights to directly inform design iterations and product decisions.

Working closely with developers throughout the project, Sarah ensured design intent was carried through into implementation. She translated designs into clear user stories, specifications, and documentation, while maintaining an ongoing dialogue with the development team to address technical considerations and ensure a high-quality final experience.

The resulting digital service supported the client's transition from traditional products towards digital services, creating a more accessible and scalable customer experience and strengthening their ability to meet evolving customer expectations in an increasingly digital market.

Experience

Product Designer – Scopie

Novo Nordisk A/S, Q3 2026 -

Novo Nordisk is a large multinational pharmaceutical company at the forefront of digital healthcare innovation, is dedicated to enhancing the lives of individuals managing chronic diseases through cutting-edge digital solutions.

Employees often struggle to find the right training for their needs, leading many to bypass official channels entirely. Scopie is an AI-guided platform that simplifies the learning request process by walking users through their needs and matching them to existing solutions—while providing consultants with better data to fulfill complex requests. The result: faster decisions, better learning outcomes, and significantly reduced dependency on external consultants.

Sarah worked on an existing AI learning procurement platform, with a strong focus on understanding user behaviour, validating whether the product was solving the right problems, and identifying opportunities to increase adoption and improve the overall user experience.

User research & product validation: Planned and conducted qualitative user interviews and usability testing to understand why users were—or were not—using the product. Mapped existing workflows, behaviours and pain points to validate assumptions, uncover unmet needs and ensure the team prioritised the right problems.

Adoption & user growth: Investigated barriers to adoption and explored how the product could better support different user needs and workflows. Used research insights to identify opportunities for increasing usage and bringing more users into the product.

User journeys & flow optimisation: Designed and tested an additional user flow to complement the existing generic journey, creating a more relevant entry point for different user needs and helping broaden product adoption.

Continuous UX improvement: Translated findings from user testing into prioritised product and UX improvements, working closely with the cross-functional team to iterate on the existing experience and test whether changes addressed identified pain points.

Measurement & success metrics: Helped define success metrics for new flows and UX improvements, with a particular focus on adoption, usage and whether product changes resulted in more users successfully engaging with the platform.

UX & UI Designer, Product Design – AI Lab-/Products
Novo Nordisk A/S, Q3 2024 - Q2 2025

Novo Nordisk is a global healthcare company headquartered in Denmark, specializing in the development and production of pharmaceutical products.

The AI Center of Excellence at Novo Nordisk launched the AI Products team with a vision to enhance the daily work of Novo Nordisk employees by leveraging the latest advancements in AI, particularly within Generative AI (GenAI).

As a UX Designer on the Novo Nordisk AI Product project, Sarah was involved from the first discovery sessions through to the design and launch of the solution. The project aimed to introduce an internal AI-powered tool to all employees, from technical specialists to people with no prior AI experience, presenting a complex UX and UI challenge.

User research became the foundation for the design strategy. Sarah worked to simplify the experience and make the tool approachable without compromising its capabilities. She mapped personas and user journeys across different levels of technical and AI experience and translated these insights into user flows, interaction patterns and intuitive UI designs. Working closely with the team, she shaped features and interfaces that were relevant, easy to understand and aligned with real employee use cases.

Sarah took a hands-on role in both UX and UI design, moving from early concepts and wireframes to high-fidelity interfaces and detailed interaction design. She focused on creating a clear and consistent experience across the product, including navigation, chat interactions, feature discovery, contextual guidance and onboarding. Close collaboration with developers ensured that the intended experience and UI quality were carried through into implementation.

To keep the solution connected to user needs throughout design and development, Sarah established a continuous feedback loop with a power user group. Through usability testing and rapid prototyping, she validated and refined both new features and existing UI. This helped uncover usability issues and misunderstandings early and enabled the team to iterate quickly. From simplifying interactions and improving UI copy to refining visual hierarchy and contextual guidance, design decisions were continuously informed by user feedback.

Sarah also played an important role in knowledge sharing across Novo Nordisk. She regularly shared research findings, usability insights and design learnings with stakeholders and other teams working on AI products, helping align efforts and ensure that the perspectives of both technical and non-technical employees were represented in the broader AI strategy.

To support adoption and education, Sarah helped shape onboarding flows, learning materials and in-product guidance aimed at making AI accessible to a broad employee audience. Her end-to-end approach, spanning research, UX strategy, UI and interaction design, prototyping and usability testing, helped create a solution that made AI intuitive, approachable and useful in employees' everyday work.

Impact:
- Launched a user-centric ChatGPT solution with a 15% increase in active users
• Enabled the creation of 1,500+ custom chatbots, showing strong engagement and personalized use at scale

• Embedded continuous UX feedback loops, empowering the team to iterate and release features aligned with actual user needs

Product Designer – Diabetes Insights Library
Novo Nordisk A/S, Q3 2024 - Q4 2024

The client, a large multinational pharmaceutical company at the forefront of digital healthcare innovation, is dedicated to enhancing the lives of individuals managing chronic diseases through cutting-edge digital solutions.

The Diabetes Insights Library is a GenAI-powered product developed for the Diabetes Insights department to revolutionize data interpretation in their complex information domain. It was produced with a vision to help professionals efficiently extract information from intricate slide decks and reports through a user-friendly chat interface, providing a quick access to key insights.

Sarah joined the technical team as a UX/UI Designer to build the Diabetes Insights Library, an AI-powered internal application designed from the ground up and developed in four months. The solution combined a conversational chat interface and document management system with a Retrieval Augmented Generation (RAG) framework, enabling employees to quickly explore and retrieve insights from complex internal documentation.

Sarah led the end-to-end design process, taking ownership from early discovery and problem definition through concept development, UX and UI design, validation, and final delivery. She conducted user interviews to understand existing workflows, information needs, and pain points, translating these insights into clear product requirements and design priorities.

Based on the research, Sarah developed the initial product concept, information architecture, user flows, wireframes, and high-fidelity UI, defining the visual and interaction design from the ground up. Working closely with stakeholders, she aligned user needs with business and technical requirements. A key challenge was making a technically complex AI solution feel intuitive and accessible, defining how users could interact with documents through conversational AI while maintaining clarity and confidence.

Throughout development, Sarah worked closely with engineers to evaluate technical feasibility, refine interactions and UI details, and ensure consistency between design and implementation. The product was continuously tested and iterated with users, allowing feedback to directly inform improvements to the chat experience, document management, and overall usability.

The resulting solution transformed how employees could interact with internal knowledge, providing a more intuitive way to search, explore, and extract relevant insights from existing documentation.

UX Market Researcher – UX research

Qliro Group, Q1 2024 - Q1 2024

Qliro is a leading Nordic fintech company offering payment and financial services to consumers and merchants. With a focus on convenience and flexibility, Qliro provides solutions that enable seamless online shopping experiences, including payment processing, financing options, and personalized offers.

Qliro wanted to investigate why they have a higher conversion rate in Sweden than in Denmark and Norway. Therefore, they sought a deeper understanding and examination of the two markets by user-testing their solution on Lyko.com and Nelly.com.

Sarah conducted guerrilla testing and interviews in Copenhagen to gain a more comprehensive understanding of the existing checkout experience. In just two days, she engaged with 38 participants, utilizing affinity mapping through Miro to pinpoint and unveil trends derived from the interviews and tests. Subsequently, the findings were presented to the product owner of payment at Qliro.

Keywords: Affinity Mapping, Guerilla Testing, User Interview, User Research, Miro

UX Designer & Researcher – Customer experience

Garnier , Q3 2023 - Q4 2023

Garnier is owned by L'oréal and is a global beauty brand renowned for its skincare, haircare, and beauty products, offering accessible and innovative solutions for consumers worldwide.

Garnier sought a partner to develop Brand Design Guidelines, offering insights into design principles and recommendations for their new website. The guide serves editors, agencies, and onboarding new employees and partners, ensuring a user-friendly experience.

Sarah joined the team as a UX Designer, helping shape and improve the company's brand and design guidelines into a clear, accessible, and user-friendly digital experience.

She led UX research and stakeholder interviews across the organisation to understand user needs, identify key pain points, and prioritise opportunities for improvement. These insights informed the overall information architecture, navigation, content structure, and visual direction of the platform.

With a strong focus on usability and findability, Sarah developed a cohesive UX concept and translated it into a scalable solution in ZeroHeight. She worked closely with stakeholders throughout the process, continuously testing and iterating on the experience to ensure that both the structure and content were intuitive and supported users in quickly finding the guidance and assets they needed.

Sarah also played an active role in stakeholder management, aligning different perspectives and requirements across teams and translating them into clear design decisions and priorities.

Together with the team, she helped strengthen the company's brand consistency by creating a central source of truth for how and when brand and design elements should be used. The solution enabled internal teams, new employees, and external agencies to work more efficiently, reuse existing assets and guidelines, and reduce duplicated design work.

UX designer & content creator, UX designer – Customer experience

Convatec , Q2 2022 - Q4 2023

Convatec, with more than 9,400 employees and 11 factories spread across 8 countries, operates in over 110 countries. They stand as one of the largest companies in the medical equipment and healthcare sector, specializing in manufacturing and marketing a wide range of products in wound care, ostomy care, and continence care

The medical company was in search of a partner to assist in the development of a new website and a migration to a new CMS system. A crucial aspect of this endeavor was to standardize the appearance across all different markets and ensure that they would maintain the structure and the new design across markets in the long run.

Sarah joined the team as a UX Designer to support the redesign and migration of the company's website to a new CMS, with a particular focus on information architecture, content structure, navigation, and usability.

She worked closely with stakeholders to understand business and user needs and helped define how a large amount of existing content should be organised, prioritised, and translated into the new website structure. Sarah mapped and restructured content, developed intuitive navigation principles, and helped establish a clear information architecture that made it easier for users to find relevant information across the site.

Throughout the project, Sarah collaborated with the wider design, content, and development teams to translate requirements into scalable UX solutions within the capabilities of the new CMS. She helped ensure consistency across page structures, content patterns, and navigation while balancing user needs, business requirements, and technical constraints.

The new website created a more intuitive and consistent digital experience while establishing a scalable foundation that could be adopted across multiple markets. This strengthened the company's digital brand presence and enabled local teams to deliver more consistent customer experiences.

Sarah's role as a UX designer was pivotal in shaping the development of the new platform from a user experience perspective. Her primary goal was to ensure that the platform was user-centric, placing the needs and preferences of users at the forefront of the design process.

One of Sarah's key contributions was consolidating brand guidelines, module usage, and a detailed CMS implementation guide within the platform. By doing so, she provided a comprehensive framework for maintaining design consistency and facilitating efficient page creation for editors. Throughout the development process, Sarah continuously validated her design decisions by collaborating closely with users and developers. This iterative approach allowed Sarah to fine-tune the platform to better align with user needs and preferences, ultimately enhancing its overall usability and effectiveness.

The platform has facilitated the company's ability to maintain consistency in design across markets by providing comprehensive brand guidelines and module usage. Additionally, it serves as a valuable resource for building new pages, offering a detailed CMS implementation guide. Furthermore, the platform includes tools for analyzing data, allowing the company to gather insights and optimize user experience continuously.

UX & UI Design – Customer experience

Brødrende Dahl, Q4 2022 - Q3 2023

Brødrende Dahl is a Danish company specializing in the distribution of installation materials and solutions within plumbing, heating, and sanitation. They provide a wide range of products, services, and expertise to professionals in the construction and installation industries across Denmark.

The client was looking for a partner to establish a connection between the client's webshop, brand, and email flow with the overarching goal of creating an enhanced customer experience and establishing a strong and meaningful relationship between the brand and its customers.

Sarah joined the project as a UX Designer to create a more cohesive customer experience across the webshop, brand, and email communication. Her focus was on connecting previously fragmented touchpoints and creating a seamless end-to-end journey that supported both customer needs and business objectives.

She used quantitative data and customer insights to understand user behaviour, preferences, and key drop-off points across the journey. This was complemented by desk research, competitor analysis, and stakeholder workshops to build a holistic understanding of the customer experience and identify opportunities for optimisation.

Sarah mapped the existing customer journey and user flows, highlighting gaps and inconsistencies between touchpoints and prioritising areas with the greatest potential for improvement. Based on these insights, she developed optimised user flows and design concepts that created a clearer and more consistent experience across channels.

A key focus was redesigning and optimising the email journey, including its structure, content hierarchy, visual design, messaging, and connection to the webshop experience. Sarah worked to ensure that each interaction felt relevant and consistent with the overall brand while guiding customers towards clear next steps.

The resulting experience created a stronger connection between brand, webshop, and CRM communication, improving the overall customer journey while contributing to increased engagement and conversion.

UX Designer – Customer experience

Bank Nordik, Q3 2022 - Q1 2023

The company is a financial institution based in the Faroe Islands and Denmark. It offers a wide

range of banking services to individuals, businesses, and institutional clients. With a blend of traditional banking and innovative digital solutions, the company aims to meet the evolving needs of its customers. It prioritizes personalized advice and high-quality customer service while maintaining financial stability and responsible business practices.

Bank Nordik sought partners to spearhead a comprehensive digital transformation across all its services, with a central focus on enhancing user experience. This transformation aimed to modernize and optimize the company's digital platforms, systems, and processes to better meet the evolving needs and expectations of its customers. By prioritizing user experience, the company aimed to deliver seamless, intuitive, and personalized digital interactions that would enhance customer satisfaction and loyalty.

Sarah joined the project as a UX Designer, leading the end-to-end design process from early discovery and problem definition through concept development, validation, and delivery.

She led user research and discovery activities to uncover customer needs, behaviours, and pain points, combining user insights with market research and customer journey mapping to identify and prioritise key opportunities. Sarah also facilitated workshops with the client and key stakeholders to align on user needs, business objectives, and product direction.

Based on these insights, Sarah translated complex requirements into intuitive user journeys, flows, and concepts, with a strong focus on usability, clear navigation, and creating a seamless end-to-end experience. Concepts were continuously tested and validated, allowing insights to directly inform design iterations and product decisions.

Working closely with developers throughout the project, Sarah ensured design intent was carried through into implementation. She translated designs into clear user stories, specifications, and documentation, while maintaining an ongoing dialogue with the development team to address technical considerations and ensure a high-quality final experience.

The resulting digital service supported the client's transition from traditional products towards digital services, creating a more accessible and scalable customer experience and strengthening their ability to meet evolving customer expectations in an increasingly digital market.

UX Designer – Product Designer

Atrial Fibrillation project, Q1 2022 - Q2 2022

The project involved collaboration with the cardiology department at Gentofte Hospital, with a specific focus on developing a digital solution tailored for patients with Atrial Fibrillation (AF) and healthcare professionals. The objective was to enhance education and provide comprehensive information about the condition.

Sarah's role in this project as a UX designer entailed immersing herself in the field of cardiology and AF, gaining a deep understanding of the needs and challenges faced by patients and healthcare professionals. The first step involved conducting interviews with both cardiologists and patients to gain a deeper understanding of their current situations and the challenges they face. Subsequently, workshops were facilitated with both cardiologists and patients to further comprehend their challenges and identify potential opportunities, paving the way for

developing a digital concept beneficial to both parties. In addition to interviews and workshops, Sarah also mapped out the various touchpoints in a user journey for patients living with AF to explore how a digital solution could enhance the journey for both patients and cardiologists.

Based on the gathered data, Sarah and the team recognized the immediate need to develop a digital solution for patients with Atrial Fibrillation. This resulted in a solution allowing patients to self-educate about their condition and easily seek assistance from healthcare providers in emergencies. It also provided them with an overview of their medical history and upcoming appointments with hospitals and doctors, thereby providing significant value to hospitals as patients become more informed about their condition.

UX Design – Product Designer

Anonymous client, Q3 2022 - Q4 2022

The client is a Danish asset management company known for offering investment solutions and funds to individual and institutional investors, focusing on sustainable and diversified portfolios across various asset classes. The company aims to establish a comprehensive universe for sustainable investment, reflecting a commitment to responsible and ethical financial practices. This initiative underscores the company's dedication to offering investment opportunities that align with environmental, social, and governance (ESG) criteria. By creating this universe, the company seeks to provide investors with a diverse range of sustainable investment options tailored to their values and preferences.

As UX designer, Sarah had the responsibility to conduct interviews with stakeholders and customers to gather insights into their investment preferences and sustainability goals. Using the insights gathered, Sarah was part of the developing concepts and wireframes for the sustainable investment platform. These wireframes served as blueprints, outlining the layout, functionality, and user flow of the platform. By incorporating user feedback and aligning design decisions with business objectives, Sarah ensured that the platform met the needs of both users and the company.
